POSITION TITLE: Industrial Engineer

POSITION LOCATION: Reno, NV

POSITION DESCRIPTION:

Arrow Electronics is currently seeking an experienced Industrial Engineer position for Distribution Center in Reno, Nevada. This individual will help Arrow reduce costs and increase productivity. The position will report to Logistics Value Add Engineering Manager located in Reno. Duties include, but are not limited to:

- Facilitating change management, functional training, and supervisor training
- Fostering relationships with senior management and executives to provide holistic project guidance
- Responsible for managing budget, schedule, resource allocation, and task execution
- Developing ROI recommendations for projects based on quantitative and qualitative data
- Project manager and design lead for implementation of Labor Management software application at tier one retail client
- Providing industrial engineering support during implementation of an engineered standards labor management program for three distribution centers on the east coast
- Traveling extensively to train each management team in usage of labor management software, how to understand the reporting metrics, and how to apply the information for maximum labor efficiency
- Recommending new best practices, facility layout changes, and SOP updates based off of detailed analysis of distribution center activities and engineered standards data during site visits
- Designing and building equipment for specific business units or customers to use; developing process, procedures, and testing for business units and customers—generally for distribution and production centers; creating, maintaining, and providing documentation
- Responsible for the design and build of equipment and managing the implementation of improvement solutions for the production floor in the areas of personnel and equipment utilization
- Experience in developing engineered labor management standards through time study or using M.O.S.T.

PREFERRED QUALIFICATIONS:

- Minimum four years in a distribution or consulting firm environment
- Typically requires five to seven years of related experience with a four-year degree, three years and an advanced degree, or equivalent work experience
- Project Management—coordinating with internal resources and third parties/vendors for the project execution within time and budgetary constraints
- Process mapping skills—the ability to activity model, process map, and workflow model/map, including data collection
- Solves complex problems; takes new perspective using existing solutions

- Works independently; receives minimal guidance
- Acts as a resource for colleagues with less experience
- Provides informal guidance to junior staff
- Works with minimal guidance
- Data analytics—the ability to identify, review, and understand data; data may come from various sources, including processes
- Group collaboration skills—the ability to bring groups for various areas together, collaborate, and gain consensus
- Access or SQL database skills are a plus
- Organization—the ability to organize, prioritize, and manage work and multiple initiatives
- Ability to read, write, speak, and understand the English language in a business environment
- Spanish is a plus
