POSITION TITLE: Assistant Construction Superintendent

POSITION LOCATION: Sparks, NV

POSITION DESCRIPTION:

Tesla is accelerating the world's transition to sustainable energy, offering the safest, quickest electric cars on the road and integrated energy solutions.

As a Construction Superintendent, the candidate will be playing a critical role in building the world's largest factory. The candidate will work primarily in the field managing trades and subcontractors and will be asked to work cross-functionally, interfacing with base build, construction engineering, and manufacturing engineering while tracking a project's schedule and budget. Responsibilities include, but are not limited to:

- Managing trades and subcontractors in the field
- Successfully managing large, design build construction projects
- Scheduling and leading quality control and site safety inspections
- Developing and communicating logistic and other operational plans necessary
- Interfacing with base build, construction engineering, and manufacturing engineering teams—form install through start of production
- Directing work in field, track changes, etc. both individually and leading or participating in a larger team
- Working with tool vendors as needed to facilitate successful project completion
- Developing templates and standards for future phases and projects
- Working with procurement team to create biddable work packages; tracking against estimate to manage costs and update appropriate teams

REQUIRED QUALIFICATIONS:

- Bachelor's degree (Master's preferred) or evidence of exceptional experience
- At least two years of experience in managing and coordination of large industrial construction projects
- Ability to work within a high performance, cross-functional organization with extremely tight timelines and aggressive goals
- Experience with design-build projects

HOW TO APPLY:

Interested applicants should apply [online](#).
