POSITION TITLE: Firmware Engineer

POSITION LOCATIONS: El Dorado Hills, CA

POSITION DESCRIPTION:
Broadridge is a global fintech company with over eight billion dollars in market capitalization and is recognized as an invaluable partner for the world’s leading companies and financial institutions. The company helps drive business transformation for clients with solutions for enriching client engagement, navigating risk, optimizing efficiency, and generating revenue growth.

Broadridge is seeking a Firmware Engineer to join the team. As a Firmware Engineer, the successful candidate will perform embedded systems programming for standard systems as well as other engineering support tasks, such as research and documentation. The successful candidate will apply an understanding of basic software and control systems engineering principles to solve design-related problems. In addition, Associate Firmware Engineers will assist in the establishment of software design guidelines and practices.

DESIRED MAJORS: Computer Science & Engineering

MINIMUM QUALIFICATION:
To be eligible for this program, you must be:

- Recent college or university graduate with a Computer Science or Computer Engineering degree (specializing in low-level, real-time, machine control programming)
- Between zero and one years of relevant work or internship experience

HOW TO APPLY:
Interested applicants should contact Carlo Preston at carlo.preston@broadridge.com or apply on their Website
