

NETWORK ENGINEER

About ITS Logistics

ITS Logistics is a premier Third-Party Logistics company (3PL) that provides personalized supply chain solutions with an asset-based dedicated fleet, warehousing and distribution services, and nationwide multi-modal freight brokerage. Founded in 1999, ITS Logistics operates daily throughout the U.S. and proudly offers unparalleled service backed by its strong family values and work ethic.

The Culture

Our associates enjoy a strong sense of teamwork, community, career growth, and work/life balance. We actively seek team members who will add value to the business and strength to our culture. Treating others with respect and compassion is at the core of the ITS philosophy. We provide a safe and positive working environment for our employees and offer opportunities to grow, both personally and professionally. This belief also extends to our community, where we work to provide economic stability through quality employment opportunities and give back whenever we can.

This role is an exciting opportunity for the candidate who wants to make a difference within an expanding organization and be a part of a growing global industry.

Position Overview

This position is responsible for the network architecture design and maintenance of the brokerage division. We are seeking an experienced hands-on network engineer who is a technical leader with the capability to work in cross functional groups and in conjunction with corporate shared network resources. This is a great opportunity to work for a dynamic, fast-paced growing company. This position reports to the Director of IT within the freight brokerage division of ITS Logistics.

Principle Accountabilities

- Architect /design solutions for Azure hybrid cloud services
- Manage Azure PaaS
- Manage projects which include buildout of technical infrastructure
- Implement extensive in-house testing and research for network infrastructure improvement
- Manage and maintain network and security documentation
- Proactively manage VMWare product
- Proactively identify, isolate and resolve network problems to avoid minimal impact to the business
- Participate in the development and implementation of business continuity plans.

NETWORK ENGINEER

- Participate in the development and implementation of information security policy to include network security architecture, network access, and monitoring policies.
- Ensure that acquired or developed systems and architectures are consistent with the organization's security architecture guidelines
- Coordinate with local area vendors and consultants
- Troubleshoot and resolve network problems as required
- Manage priorities of helpdesk personnel
- Support helpdesk as required
- Keep abreast of latest technology trends and provide recommendations on how new technologies and processes could help improve the team

Position Requirements

The ideal candidate will be accustomed to working in a very fast paced team environment. Must be decisive, drive results through others and offer constructive criticism when appropriate. Additional attributes needed:

- Seven plus years of equivalent experience
- Experience with Azure/On-Premise hybrid solutions
- Working knowledge with SAN Redundancy and network administration with Cisco switching, routers, firewalls, and phones.
- On-Call Availability required
- Proven success with fast-paced growth-minded companies
- Experience with VMWare, Thin Clients, or similar
- Experiencing with supporting 200 plus users preferred
- Experience with supporting call centers preferred

Job type: Full-time.

The Compensation for this position is highly competitive and includes a comprehensive benefits plan with a matching 401k.
