POSITION TITLE: Product Engineer Intern

JOB LOCATION: Incline Village, NV

POSITION DESCRIPTION:
As a Ridgeline Software Engineer Intern, you’ll have the unique opportunity to build high-quality, creative business applications in a fast-moving, progressive work environment. You’ll think outside the box and add your own genius, passion, and interests to the software development lifecycle.
Our 10-week paid summer internship will have you working alongside full time employees at our HQ in Incline, Village, NV. Responsibilities include participating in the design, development, testing, and debugging of software components and products. As one of Ridgeline’s first 200 employees, you will help shape our culture, make a big impact on a small team, and learn what it takes to build a successful company. Our team aims to leave a legacy in an industry primed for change.

Key Expectations:
• Contribute business insight, design skills, and refine technical expertise in a hands on environment to a team where design, strategy, and engineering collaborate closely
• Be involved in the entire software development process, from requirements and design reviews through the implementation of a new product
• Impact a developing tech stack based on modern front-end frameworks and cost-efficient utilization of AWS back-end services
• Participate in the creation and construction of developer-based automation that leads to scalable, high-quality applications customers will depend on to run their businesses
• Think creatively, own problems, seek solutions, and communicate clearly along the way
• Contribute to a collaborative environment deeply rooted in learning, teaching, and transparency

QUALIFICATION:
• Graduating in Fall 2020 - Spring 2021 with a degree in Computer Science, Computer Engineering, Information Science, or a related discipline
• Strong knowledge of data structures, algorithms, and architectural patterns
• Expertise in one or more of the following languages: Golang, Python, Java
• Working knowledge or expertise in JavaScript, HTML, CSS
• Willingness to learn about new technologies while simultaneously developing expertise in a business domain/problem space
• Basic understanding of automated testing
• Ability to focus on short-term deliverables while maintaining a big-picture perspective
• An aptitude for problem solving
• Ability to communicate effectively with colleagues at all levels
• Serious interest in having fun at work

DESIRED MAJORS: Computer Science and Engineering
